

Plumbing in Camping Units

We already have SPS 325 to enforce, now we have to inspect with a new code. Are these new plumbing codes different from SPS 325?

SPS 327 plumbing mimics SPS 325 with a few differences:

LOCAL WASTE PIPING, FLOOR DRAINS FOR GARAGES & Sanitation facilities and devices are not in SPS 327.

There are three subsections that are in SPS 327 that are not in SPS 325.

SPS 327.52(3) Sinks. **(a)** No more than one sink is required to be installed in a camping unit.
(b) If only one sink is installed in a camping unit, the sink shall be installed in the kitchen of the camping unit.

SPS 327.52(4) Except as provided in s. SPS 327.11, the inspection of the plumbing of a camping unit is not required. (Note: **SPS 327.11** requires rough and final plumbing inspections)

SPS 327.52(5) PIPE AND TUBING. The pipe and tubing for any portion of the plumbing system of a camping unit may be flexible plastic.

How do I inspect for plumbing roughs and finals?

The same as a one- or two- family dwelling, except:

- Only one sink is required in the camping unit and you need to make sure that it's located in the kitchen.
